MENGIN-LECREULX D., VAN HEIJENOORT J.;

J. BACTERIOL. 175:6157 (1993).

-! FUNCTION: BIFUNCTIONAL ENZYME RESPONSIBLE FOR THE ACETYLATION OF GLC.N-1-P TO GIVE GLCNAC-1-P AND THE SYNTHESIS OF UDP-GLCNAC.

-! CATALYTIC ACTIVITY: UTP + N-ACETYL-ALPHA-D-GLUCOSAMINE

-! PHOSPHATE = PYROPHOSPHATE + UDP-N-ACETYL-D-GLUCOSAMINE

-! PATHWAY: PEPTIDOGLYCAN AND LIPOPOLYSACCHARIDE BIOSYNTHESIS.

-! CAUTION: REF. 2 ENQUENCE DIFFERS FROM THAT SHOWN DUE TO A FRAMESHIFT THAT CREATES TWO ORFS.

-! SIMILARITY: BELONGS TO THE CYSE/LACA/LDXA/NODL FAMILY OF ACETYLTRANSFERASES. COMPOSED OF MULTIPLE REPEATS OF [LIV]-G-X(4).

XL WOLLEIC ACIDS RES. 16:10372-10372(1988).

L. WUCLEIC ACIDS RES. 16:10372-10372(1988).

C. FUNCTION: PRODUCES ATP FROM ADP IN THE PRESENCE OF A PROTON

GRADIENT ACROSS THE MEMBRANE.

C. SUBUNIT: F-TYPE APPRASES HAVYE 2 COMPONENTS, CF(1) - THE CATALYTIC

CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE

SUBUNIT:S ALPHA(3), BETA(3), GAMMA(1), DELTA(1), EPSILON(1). CF(0)

HAS THREE MAIN SUBUNITS: A, B AND C.

C. SIMCLIARTY: BELONGS TO THE ATPASE EPSILON CHAIN FAMILY.

SINCHARTY: BELONGS TO THE ATPASE EPSILON CHAIN FAMILY.

PIR: S01903; S01903.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Mean 16.764; Variance 52.447; scale 0.320 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

R Medical melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

T immunise animal against melanoma.

C The immunogenic peptide is derived from cDNA25 (R84854), a melanoma antigen derivative of gpl00 (see R84855). The peptide and its derivatives (see R84200-R84211) are used in medicaments (vaccines) for the treatment or prevention (by immunization) of melanoma. Antibodies against melanoma-specific antigens and its immunogenic peptides may be used in the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Claim 1: Page 22-24: 40pp; English.

Immunogenic peptides derived from the melanoma associated antigen
may be used in the production of vaccines. Nucleotide sequences
encoding the immunogenic peptides may be used as primers and probes
in the detection of melanoma cells. Tumour infiltrating lymphocytes
capable of binding to the melanoma associated antigen can be
cultured ex vivo and returned to melanoma particles, and when
radiolabelled, they may be used to identify tumour deposits.
                                 22-JAN-1996 (first entry)

Melanoma-specific immunogen comprises epitope(s) homologous with pMelanoma-specific immunoopen stimulators of HLA-A2+CTL's useful in adoptive immuno-therapy
Example 8; Page 51; 148pp; English.
A melanoma-specific immunogen homologous with pMel-17 comprises one or more CTL (cytotoxic T lymphocyte) epitopes from the group R82098-R82194 capable of eliciting a CTL response. The epitopes R82098-R82108 are of particular interest. The immunogen can be used for partial protection in mammals against melanoma peptides which are homologous with pMel-17 are highly potent stimulators of HLA-A2+CTLs in several cell lines and can be used in immunotherapy or incorporated into immunogenic conjugates as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure, Page 75-78 mg (1974).

Human neurofibromatosis type 1 (NF1)-GAP related domain (GRD) mutant clones NF201 (given in R5921) and NF204 (R59922) show mutant clones NF201 (given in R5921) and NF204 (R59922) show strong suppression activity for RASZVall9, and inhibit v-Ras-induced transformation in mammalian cells. The mutation sites of these proteins were located in one of the most conserved regions of GRD. These sites were compared with those of other GRD family proteins, yeast Ira2 (R59928) and Ira1 (R59923), human GAP (R59924) and Schlzosaccharomyces pombe Gapl (R59925).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Blocking Ras-induced effects on a cell - by introducing a GTPase activating protein to the cell, used esp. in treatment of cancers
                                                                                                                  25-MAR-1996 (first entry)
Melanoma-specific mutant immunogen epitope 9mer peptide.

The encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Claim 81; Fig 5A: 184pp; English.

Claim 81; F
DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Claim 81, Fig 7A: 184pp: English.

State of the claim 81, Fig 7A: 184pp: English.

Is recognized by T-lymphocytes, and is a derivative of the melanoma-specific antigen CDNA75 (see R84854). gpl00 is a source of immunogenic peptides which are optionally modified to enhance their binding to a MHC molecule, and used in medicaments, especially vaccines, for the treatment or prevention (by immunisation) of melanoma. Antibodies against CDNA2 and its immunogenic peptides may be used in the detection and isolation of the antigen from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Streptomyces clavuligerus which catalyses the reaction in which deacetoxycephalosporin ( DACC) is hydroxylated at the 3-methyl gp. deacetoxycephalosporin ( DACC) is hydroxylated at the 3-methyl gp. to form deacetylcephalosporin ( DAC). The AA sequence differs from that which would result if the nucleotide sequence given in the specification was translated. It appears that a nucleotide (T) has been omitted from position 307 resulting in a shift of reading frame and a completely different protein to the sequence given in the specification (this also appears to have AAs 141-160 duplicated).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure: Page 4; 15pp; English.

The amino acid (AA) sequence is that of a hydroxylase from Streptomyces clavuligerus which catalyses the reaction in which deacetoxycephalosporin C (DAOC) is hydroxylated at the 3-methyl gp. to form deacetylcephalosporin C (DAC). The AA sequence differs from that which would result if the nucleotide sequence given in the specification was translated. It appears that a nucleotide (T) has been omitted from position 307 resulting in a shift of reading
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA encoding Streptomyces clavuligerus hydroxylase - used for increasing the yield of cephalosporin cpds. and producing new cephalosporin(s)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA encoding Streptomyces clavuligerus hydroxylase – used for increasing the yield of cephalosporin cpds. and producing new

The sequences given in R44430-32 are encoded by the eryA fragment of the Saccarapolyspora erythraea genome. These polypeptides are involved in the biosynthesis of the polyketide segment of erythromycin. Ordersation step. The precise succession of elongation steps is condensation step. The precise succession of elongation steps is dictated by the genetic order of the modules. The DNA encoding these polypeptides may be specifically altered such that novel polyketide molecules of desired structure are produced. Three types of alteration may be produced; those inactivating a single function in a module which does in a triest acyl chain growth; those inactivating a single function in a module. The mutations may be introduced by gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                   ö
frame and a completely different protein to the sequence given here. The sequence shown here is identical to that given in the specification, AAs 141-160 appear to have been mistakenly duplicated as there are no corresponding codons for such a duplication in the Sequence 338 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                  Disclosure; Fig 3; 67pp; English.

4 of the 13 exons which pVI-3 (22) encompasses are within the
4 of the 13 exons which pVI-3 (22) encompasses are within the
5 breakpoint cluster region (bcr) (see N60228). To exactly determine
5 the location of the breakpoint, in K-56 (224°), the DNA sequence of
5 the breakpoint region of K-56 was compared with the normal genomic
6 chromosome 22 DNA sequences (see N60229,N6030). In the DNA of
7 patient 0319129, the chromosomal break has occurred in a rather
7 precise manner, leading to the generation of a 22q- and 94+
7 sequence exactly reflecting the sequence of the normal chromosome 22
7 and 9 DNA sequences (N60231,N60232,N61202,N61203). However, in the
7 predient 0312015, sequences are found between the
7 breakpoints on chromosome 9 and 22 which are not present in the
7 region sequenced of the normal chromosomes 9 and 22 (N60233,N60234,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The amino acid sequence is that of bacterial amylase A-180 which is used to prepare maltopentose (G5) in high yields by hydrolysis of starch. It can be modified to ensure its excretion, obviating the need to concentrate and purify the enzyme, i.e. the culture supernatant can be used directly for G5 prodn. G5 yields of over 90% are possible, eliminating the need for further G5 purification. G5 is used in medical assays for diagnosis, as carbohydrate sources in liquid feeding compsns. and for converting (by esterification) fatty acids to water-soluble form, suitable for use in stable infusion solns.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Parting Super:agonists, antagonists and super:antagonists or hormones - partic. interleukin-6, oncostatin M, leukaemia hormones - partic. interleukin-6, oncostatin M, leukaemia and battic. interleukin-6, oncostatin M, leukaemia by antic. interleukin-6, oncostatin M, leukaemia cartic., ciliary neurotrophic factor or interleukin-11 Example 2: Page 12: 35pp. English.

Example 2: Page 12: 35pp. English.

CC The amino acid sequence of the helix A of the human interleukin-6 (IL-6).

The gene encoding the IL-6 was mutated by PCR to change certain of the amino acids in helix A (see R68955-60). The biological activity and decompared. The interaction of the IL-6 and its mutants comparants of a method to detect the superagonists.

CC could then be compared. The interaction of the IL-6 and its mutants superantagonists of a hormone. This is performed by comparing the a.a.

CS superantagonists of a hormone with its (ant)agonist; comparing the a.a.

CC sequences of the hormone with its (ant)agonist; comparing the a.a.

CC and sequence of the hormone receptor with the hormone-specific receptor and gpl30, and identifying residues forming a part of the site of interaction with the hormone receptor and gpl30 based on 3-dimensional compact (ant)agonists of hormones such as interleukin-6 (IL-6), concostatin M (OSM) leukaemia inhibitory factor (IIF) or ciliary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
05-SEP-1995 (first entry)
Wild type interleukin-6 helix A.
Human; interleukin-6; IL-6; helix A; biological activity; superagonist;
Binding activity; receptor; 9p80; antagonist; superantagonist; hormone;
9p130; receptor complex; oncostatin; leukaemia inhibitory factor; LIF;
ciliary neurotrophic factor; CNFF; agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

(94347 encodes R77392 the human IL-6 deletion mutant IL-6a'C2 which lacks the amino acids Gly5-Leul9 and Cys73-Cys83 of the wild type protein. The cDNA can be used for the recombinant prodn. of IL-6a'C2 which has increased stability compared to wild type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

FOR T LYMPHCOYTE PROLIFERATION AND INTERLEUKIN 2 PRODUCTION, BY BINDING CD28 OR CTLA-4. MAY PLAY A CRITICAL ROLE IN THE EARLY BINDING CD28 OR CTLA-4. MAY PLAY A CRITICAL ROLE IN THE EARLY STEAM OF T CELLA WITHATON AND OSSTIMULATION OF NAIVE T CELLS, SUCH AS DECIDING BETWEEN IMMUNITY AND ANERGY THAT IS MADE BY T CELLS WITHIN 24 HOURS AFTER ACTIVATION.

-:- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-:- SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. CONTAINS ONE C2-LIKE AND ONE V-LIKE DOMAIN.

-!- FUNCTION: NEUROFILAMENTS USUALLY CONTAIN THREE IF PROTEINS: L, M,

AND H WHICH ARE INVOLVED IN THE MAINTERANGE OF NEUROWAL CALIBER.

-!- FUNCTION: NEUROFILAMENTS USUALLY CONTAIN THREE IF PROTEINS: L, M,

AND H WHICH ARE INVOLVED IN THE MAINTERANGE OF NEUROWAL CALIBER.

-!- FUNCTION: NEUROFILAMENTS OF THE SERINES IN THIS MOTIF. IT IS

THOUGHT THAT PHOSPHORYLATION OF NEH RESULTS IN THE FORMATION OF

INTERFILAMENT CROSS BRIDGES THAT ARE IMPORTANT IN THE MAINTENANCE

OF THE LARGER NEUROFILAMENT POLYPEPTIDES (NF-M AND NF-H), THE

LEVELS OF PHOSPHORYLATION SEEMS TO PLAY A MAJOR ROLE IN THE FUNCTIONNO

OF THE LARGER NEUROFILAMENT POLYPEPTIDES (NF-M AND NF-H), THE

LEVELS OF PHOSPHORYLATION SEING ALTERED DEVELOPMENTALLY AND

COINCIDENT WITH A CHANGE IN THE NEUROFILAMENT FUNCTION.

--- SIMILAMENTY: TO ALL OTHER INTERMEDIATE FILAMENT PROTEINS.

LANDSBERG ERECTA;
WILKIE S.E., LAMBERT R., WARREN M.J.;
SUBMITTED (SEP-1995) TO EMBL/GENBANK/DDBJ DATA BANKS.

-!- FUNCTION: IMPORTANT FOR THE METABOLISM OF AMINO ACIDS AND KREBS-
CYCLE RELATED ORGANIC ACIDS. IN PLANTS, IT IS INVOLVED IN NITROGEN
METABOLISM AND IN ASPECTS OF CARBON AND ENERGY METABOLISM.

-!- CATALITIC ACTIVITY: L-ASPARTATE + 2-OXOGLUTARATE = OXALOACETATE +
                                                                                                                                                                                                                                                                                                                                                   Gaps

J. BACTERIOL. 173:398-400(1991).

1- FUNCTION: HYDROXYLATION OF DESACETOXICEPHALOSPORIN C IN
3-POSITION TO FORM DEACETYLCEPHALOSPORIN C.

1- PATHWAY: CEPHALOSPORIN BIOSYNTHESIS.

1- SIMILARITY: BELONGS TO CEFE.

1- SIMILARITY: BELONGS TO THE IRON/ASCORBATE-DEPENDENT FAMILY OF OXIDOXEDUCTASES.

BETA-KETOREDUCTASE (KR), DEHYDRATASE (DH), AND ENOYL REDUCTASE (ER) FOR PROCESSING OF THE BETA CARBON, AND THIOESTERASE (TE) FOR RELEASE AND LACTONIZATION OF THE FULL-LENGTH CHAIN.
BIOSYNTHESIS.

-:- COFACTOR: NADP.

-:- COFACTOR: CONTAINS TWO COVALENTLY BOUND PHOSPHOPANTETHEINES.

-:- IN EACH ORF OF ERYA TWO MODULES ARE PRESENT EACH ENCODING FOR A FUNCTIONAL SYNTHASE SUBUNIT. THUS ERYA SHOWING 3 ORFS CODES FOR & SYNTHASE SUBUNIT. IT IS SUPPOSED THAT EACH SYNTHASE PARTICIPATES IN ONE OF THE SIX FAS-LIKE ELONGATION STEPS REQUIRED FOR FORMATION OF THE POLYKEFIDE. MODULE 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ACYL-ENZYME INTERMEDIATE.

Mean 17.944; Variance 59.231; scale 0.303 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                      This provides an antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

This immunise animal against melanoma.

Claim 55: Page 131; 184pp; English.

The immunogenic peptide is derived from cDNA25 (R84854), a melanoma antigen derivative of gp100 (see R84855). The peptide and its derivatives (see R84200-R84211) are used in medicaments (vaccines) for the treatment or prevention (by immunization) of melanoma. Antibodies against melanoma-specific antigens and its immunogenic peptides may be used in the detection of which is indicative of a disease state

( melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page 22-24; 40pp; English.

Immunogenic peptides derived from the melanoma associated antigen may be used in the production of vaccines. Nucleotide sequences encoding the immunogenic peptides may be used as primers and probes in the detection of melanoma cells. Tumour infiltrating lymphocytes capable of binding to the melanoma associated antigen can be cultured ex vivo and returned to melanoma particles, and when sendialabelled, they may be used to identify tumour deposits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Melanoma associated antigen gpl00 - used in vaccines and for the detection of tumours

DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and rimunise animal against melanoma.

Trimunise animal against melanoma.

Claim 81; Fig 5A; 184pp; English.

CDNA2 is a melanoma antigen (MART-1) which is recognized by T-lymphocytes, and is a derivative of the melanocyte-melanoma.

C specific antigen gp100 (see R84855). Antigen CDNA25 is a source of immunogenic peptides (see R84199) which are optionally modified (see R84200-R84211) to enhance their binding to a MHC molecule and used in medicaments, especially vaccines, for the treatment or prevention (by immunogenic peptides may be used in the detection and its immunogenic peptides may be used in the detection and its indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of large quantities of enzyme for conversion of precursor peptide(s) to amidated forms.

Claim 15, Page 19; 34pp. English.

This sequence represents prolylendopeptidase from Flavobacterium meningosepticum, and was decoded from the appropriate genomic DNA. Recombinant prolylendopeptidase is useful for prodn. of biologically active peptides whose C termini are alpha-amidated and have proline residues at or near their C-termini. Examples include LHRH, oxytocin, vasopressin, calcitonin, aspartocin, alpha-MSH, and morphine modulating neuropeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                claim 81; Fig 78, 184pp; English.

gp100 is a melanocyte-melanoma-specific antigen (MART-1) which is recognized by T-1ymphocytes, and is a derivative of the melanoma-specific antigen cDNA25 (see R84854). gp100 is a source of immunogenic peptides which are optionally modified to enhance their binding to a MHC molecule, and used in medicaments, especially vaccines, for the treatment or prevention (by immunisation) of melanoma. Antibodies against cDNA2 and its immunogenic peptides may be used in the detection and isolation of the antigen from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                 DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

```

```
The sequence represents a prolyl-endopeptidase from Flavobacterium meningosepticum, and is encoded by a gene isolated (using probes meningosepticum, and is encoded by a gene isolated (using probes 2.3, A=3, A=13, A=18 and A=19, based on the native enzyme sequence) in plasmid pFPEPO2 (FERM BP-3466). The enzyme may be modified for improved thermostability by molecular evolution enzyme engineering by random chemical mutagenesis and modified polymerase chain reaction). Mutants E408 (FEP-227, from plasmid pWF-FEB-227), E402/A1297/G6334 (FEP-361, from plasmid pWF-FEB-351), E402/A1297/G6334 (FEP-361, from plasmid pWF-FEB-15) and E477K (FEP-161, from plasmid pWF-FEB-15) and E477K (FEP-161) and E477K (FEP-161, from plasmid pWF-FEB-15) and E477K (FEP-161) and E477K E477K (FEP-161) and E477K E4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New mutant heat-stable prolyl:endo:peptidase enzymes - from F.meningosepticum, prepd. by mutagenesis of encoding DNB, useful for C-terminal amidation of biologically active peptide(s) e.g. insulin or calcitonin
                                                                                         Prolyl-endopeptidase.

A novel human brain sodium-dependent inorganic phosphate cotransporter (W65148), designated hBNPI, is selectively expressed in discrete populations of neurons and gliam. Its amino acid sequence was deduced from a cDNA clone (T42664) isolated from a human hippocampus cDNA library. hBNPI can be expressed in transformed host cells and used to determine the effectiveness of test cpds. for the treatment or prevention of disorders associated with an inappropriate stimulation of hBNPI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and alpha-amylase assays
Claim 1; Page 9-12; 16pp; English.
The alpha-glucosidase gene was isolated from the chromosomal DNA of
Bacillus stearothermophilus ATCC 12016. The gene allows production

Shiga-like toxin subunit A.
Hybrid; fusion; membrane translocation; binding region; HIV;
Hybrid; toxin; steroid; hormone; monoclonal antibody; antigen;
diphtheria; exotoxin; phenylketonuria; cholera; interleukin; IL-2;
protease; epidermal growth factor; ricin; tetanus; hexosaminidase;
of pure alpha glucosidase by recombinant techniques, free of alpha-
amylase contamination and with a greater specific activity that
previously found. Alpha-glucosidase is used for the production of
starches or for the determination of the amt. of alpha-amylase
present in body fluids for the diagnosis of pancreatic or salivary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-MAY-1996 (first entry)
Mat interleukin-1 type-3 receptor.
Interleukin-1 type-3 receptor; IL-1-3R; immune-associated disease; vector; antibody; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Interleukin-1 type 3 receptor proteins - useful for the treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Treat HYV infection, genetic enzyme-deficiency disorders etc.

Disclosure; Fig 8(1-3); 59p; English.

Hybrid molecules are produced by covalently linking

(1) a portion (8) of the binding domain of a cell-binding ligand,

(2) a portion (B) of a translocation domain of a protein able to

translocate (C) across the cell cytoplamic membrane, and

and (3) a portion (C) which is to be introduced into the cell.

(A) is derived from a steroid or polypeptide hormone, a single-chain analogue of a monoclonal antibody able to bind an antigen expressed on the cell surface, or a polypeptide toxin.

(B) is derived from a toxin (e.g. diphtheria toxin or Pseudomonas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Malfroy-Canine B, Scotield PR;

WPI: 88-177004/26.

Pecxyribonucleic acid isolates coding for enkephalinase - and prodn. of enkephalinase, used in therapeutic applications in diagnostic of enkephalinase, used in therapeutic applications in diagnostic of enkephalinase, used in therapeutic applications in diagnostic of selections is mannosuperessants.

Immunoassay and as immunosuppressants.

Disclosure; p; English.

The DNA was sequenced from poly(A+) human placental RNA. At posn. 1413 one clone, lambdaff was observed to have a G (coding for Ala); in clone lambdaff this was found to be an A (Thr). Since the former is identical to the rat amino acid at posn. 465, the latter combinate is identical to the rat amino acid at posn. 465, the latter of the manno. The DNA can be ligated into an expression vector for prodn. of the enkephalinase protein in a host. The recombinant of protein is useful in the treatment of various pathological discorders associated with endogenous peptides such as tachykinins and kinins, eg. acute inflammation, and hyperimmune responses. It is also useful in diagnostic immunosasys, and as immunosuppressants
                                                                                                                                                                                          This sequence represents human enkephalinase. Enkephalinase is a neutral endopeptidase or kidney brush border neutral proteinase. It has been isolated from the kidney, intestine, pitultary, brain and lymph nodes, and has been detected in many peripheral organs and in human neutrophils. The distribution of enkephalinase in the brain closely paralells the distribution of the enkephalins. Mammalian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                     enkephalinase may be used in the treatment of various pathological disorders associated with various endogenous peptides, eg. tachykinins and kinins.
                                                        N-PSDB; 062678.
Method for assay of enkephalinase using dansylated peptide(s) for identification of recombinant enkephalinase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel polypeptide, with diuretic action - is obtd. from atrium cardis of mammals showing specific bond to atrial natriuretic polypeptide and gene codinh it.

Disclosure, p. Japanese.

Peptide specifically binds to atrial natriuretic polypeptide (ANP) and has diuretic (partic. natriuretic) and hypotensive action.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-NoV-1990 (first entry) Arrial natriuretic polypeptide. Arrial natriuretic polypeptide binding polypeptide. Diuretic; atrium cardis; atrial natriuretic peptide binding; hypotensive action.
                                                                                                                                                           1-NOV-1989 (first entry)

Human common acute lymphoblastic leukaemia antigen
Deduced human common acute lymphoblastic leukaemia antigen;
analgesic; inhibits leukaemia; endopeptidase.
WO8905353-A.

Cytochrome P-450 I family consists of two members, IAl and IA2.

Both of them are inducible by 3-methylcholanthrene and 2,3,7,

8-tetrachlorodibenzo-p-dioxin, but have different substrate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          *superfamily cytochrome P450 electron transfer; endoplasmic reticulum; heme; membrane protein; monooxygenase; oxidoreductase
